Product name change on Voluta C202

The merger of Houghton and Shell Metal working in 2012 has given Houghton the opportunity to offer a comprehensive range of quenching fluids to meet specific heat treatment requirements. To provide more clarity in the product range Houghton are now changing the name of their Heat Treatment Product Range. Following name change have occurred.

Old number	Old product name	New number	New product name
	Voluta C202		Houghto-Quench C102

The new product will be available as soon as the old product is out of stock. This is only a name change and does not affect the product formulation. The same quality and operating performance will remain.

During a transition period both names will appear on all packaging: Houghto-Quench C102/ VC 202
